Assistant Professor

Longitudinal Quantitative Methods,  
Problem Behavior, Social Context,  
Adolescent Development

Accepting graduate students for Fall 2021

## Methodology, Adolescent Development and Problem Behavior Lab

Leveraging novel methodologies, advanced statistical modeling, and reproducible workflows the *Map Lab* seeks to clarify the developmental processes through which adolescent's experiences with their families, peers, teachers, and communities influence (mitigate or exacerbate) the development of problem behaviors (e.g., aggression, delinquency, substance use) throughout adolescence and in the transition to young adulthood. Our lab has a strong focus on translating and mobilizing knowledge with the goal of informing intervention and prevention efforts to improve the school experience for young people.

### Departmental Highlights

- TA/RA positions for masters, doctoral, and post-bac students
- Travel funds to attend national conferences and workshops
- Graduate Student Lab equipped with desk, computer, printer, locker, statistical software, and meeting area
